- Rigging Equipment
- Custom Designs

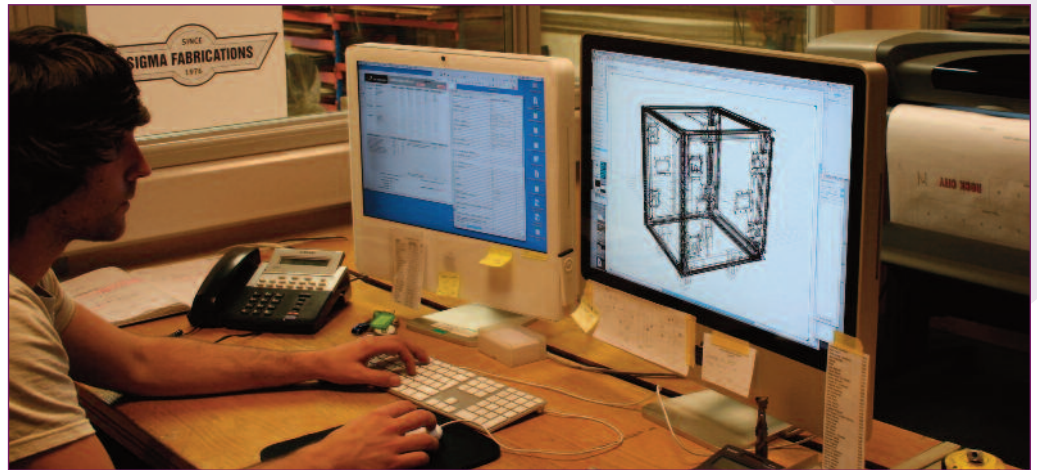

Sigma Fabrications is the new trading name for the manufacturing arm of SSE Audio Group. The new name heralds our desire to increase the profile of our manufacturing division and to make it a stand-alone entity, independent from our hire and sales divisions.

While Sigma Fabrications will continue to provide manufacturing support for our hire and sales divisions, it will be able to serve its own external client base more effectively.

Although we are launching Sigma Fabrications as a new brand, it has a distinguished history stretching back to the earliest days of SSE. The Group has manufactured custom fabrications since 1976. Now, with it's own distinctive brand, we intend to reach out to new markets and seek new opportunities.

Sigma Fabrications can custom fabricate a huge array of products for use throughout the entertainment production industry including stage risers, cabinets, flightcases, set parts, dollies and rigging equipment.

Based at the Group's Redditch headquarters, Sigma Fabrications has extensive design and manufacturing facilities. All our products are designed using CAD systems, enabling virtual prototyping as well as accuracy and consistency. It means we can reproduce units exactly at a later time. Fully rendered 3D models can be created providing a clear visual impression of what the final product will look like.

- All our products are designed using CAD systems

Manufacturing equipment includes two SCM Pratic CAD/CAM woodworking routers with nine head tool changers, a two tonne laminating press that can produce an unlimited range of surface finishes, paint and glue spraybooths and MIG and TIG welding equipment for steel and aluminium.

Sigma Fabrications has a dedicated team of staff who work exclusively for the manufacturing business. We have a strong emphasis on developing the necessary training for the various manufacturing trades and for achieving high standards of quality assurance.

In addition our creative design team has a wide experience of the performance industries and its requirements for practical manufacturing solutions, especially for touring and installation. If you have a fabrication challenge associated with the performance industries, call the specialists at Sigma Fabrications.

As part of the launch of our new enterprise, Sigma Fabrications has its own website at www.sigmafabrications.com

OUR RANGE OF PRODUCTS AND SERVICES INCLUDES

FLIGHTCASES

- We can case anything you require in a variety of formats and finishes, and the photos here are just a few clues of what we can offer.
- All our cases are built using our own range of exclusive custom designed extrusions which have various unique features to enhance our cases, and all the extrusions are built as a family to interconnect with each other in an optimised way.
- Our angle extrusion features an internal leg so the board is held in a sandwich, the rivets function is to lock the board to the extrusion.
- Most flight case manufacturers use a simple external extrusion only - so the rivet is holding the case together and the extrusion is merely a protective angle cover.
- This means our cases are inherently stronger as panels cannot be punched out.

STAGE RISERS

- Using our unique SetDeck™ we can fabricate staging and riser platforms of any shape and size to anything from a simple platform to complete sets.

CARPETED CABINETS AND CASES

- Our range of carpeted cases is perhaps what we are best known for.
- These cases are ultra strong and heavy duty, and always have the feature that all handles and fittings are rebated into the shell, so that nothing protrudes beyond the cabinet surface to protect all the fittings in transit.

STEEL FABRICATION

- We can produce set parts, transport dollies, custom rigging fittings (with load certification).
